Other

Although not exclusively I produce Archival Pigment Prints face mounted onto acrylic* in sizes up to 1.5 meters by 3 meters 9'8" long. This contemporary, polished-edge effect is achieved by sandwiching a print behind Perspex and di-bond aluminum which, helps to protect image from UV light while adding a unique 3-dimensional effect to my images.

*Research by Wilhem-Research.com suggest that work finished in this way on Gloss media under a Perspex substrate could offer a light fastness of 176 years.

Special Projects 35' x 5' prints exhibited at the Business Design Center, London for Canon UK

My work has been exhibited in eight Countries and is part of numerous private collections in at least 12 countries worldwide.

David Anthony Hall
